We found none beside the track in SU831578 where 110 spikes were counted on 13 Aug 2012. Large excavations have been cut in the sand beside that track possibly to provide material to make the enormous bund around the nearby building.

I have omitted a record for the Herriard Estate as it definitely needs access permission.

I have omitted the sites at Railroad Heath now destroyed by housing, except those in the surviving Elvetham Heath LNR part.

I have omitted some earlier records, or duplicates, with the same grid reference.
